

# AQUASHADOW

## LAKE AND POND COLORANT

Aquashadow® is a blended formulation of water soluble dyes packaged in convenient water soluble packets. Aquashadow is designed for use in lakes, ponds, decorative water features and other impounded bodies of water with limited outflow. Aquashadow beautifies murky, cloudy or off-colored water with a pleasing, natural aqua-blue tint.

### DIRECTIONS FOR USE:

1. Determine water volume (acre-feet or cubic meters) as follows:

$$\frac{\text{Length (ft.)} \times \text{Width (ft.)} \times \text{Average Depth (ft.)}}{43,560} = \text{Acre-Feet}$$

or

$$\text{Length (m)} \times \text{Width (m)} \times \text{Average Depth (m)} = \text{Cubic Meters}$$

Note: One Acre-Foot = 326,000 gal. = 1,234m<sup>3</sup>

2. Use one 7.15 oz. (203g) packet of Aquashadow for each Acre-Foot (1,234 cubic meters) of water as determined in #1 above.
3. Remove packet(s) from outer plastic bag(s) with a dry, gloved hand. Apply by gently tossing into the water body. Space packets evenly, preferable above deeper areas. In aerated systems, quicker dispersion will occur if placement is near diffusers or water turbulence.
4. Packets will dissolve within several minutes (somewhat longer in colder waters), releasing Aquashadow. Complete, even dispersion of Aquashadow will occur within hours after treatment, depending on water movement.
5. Add additional Aquashadow packets as needed to maintain desired coloration effect following dilution or water exchange.

### CAUTION - KEEP OUT OF REACH OF CHILDREN

#### WATER USE & RESTRICTIONS:

- Water may be used for irrigation or fishing immediately following treatment.
- Allow several hours for Aquashadow to disperse before swimming.
- Do not apply Aquashadow directly to drinking water sources.
- Treated water will not stain exposed surfaces.
- Treated water will not harm fish, waterfowl, pets or wildlife.
- Chlorinated water will cause fading, requiring higher dosages or more frequent treatments.

#### STORAGE & HANDLING PRECAUTIONS:

- Keep From Freezing. Freezing may cause water soluble packets to become brittle.
- Store Aquashadow containers in a cool, dry area.
- Keep packets in their original, sealed outer bags until ready for use.
- Do not handle water soluble packets with wet hands, wet gloves or place on wet surfaces.
- Small stains caused by accidental spillage can be removed with a liquid bleach solution.

NOTICE: Neither the manufacturer nor the seller makes any warranty, expressed or implied, concerning the use of this product other than indicated on the label. Buyer assumes all risk of use of this material when such handling, storage or use is contrary to label instructions. Read and follow the label directions carefully.

## BEAUTIFIES WATER IN LAKES, PONDS & DECORATIVE WATER FEATURES

### INGREDIENTS:

Acid Blue 9 Dye  
Acid Yellow 23 Dye

- Convenient no-mess application
- Concentrated- one pack treats 326,000 gallons
- Easy to apply - just toss inner pack into center of pond
- Disperses quickly and evenly within hours
- Safe for swimming, fishing and irrigation
